MASTER IN  
LAW OF THE  
**DIGITAL**  
SOCIETY

III EDITION

The emergence of the Internet and digital technology has dramatically transformed the society in which we live. The way in which we communicate, access information or carry out almost every daily activity can no longer be understood today without the development of the technologies that define the digital society. The same applies to the production and marketing of goods and services of all kinds. Information and communication technologies are no longer a specific sector of the economy, but the foundation of all innovative economic systems. The combination of these technologies with exponential developments in the field of computing and telecommunications networks give rise to new and increasingly sophisticated tools, leading today to a new era, the era of disruptive technologies. Recent breakthroughs in Artificial Intelligence are just an example of this new scenario.

Law must adapt to this new reality, responding to the problems arising from the use of new technologies, such as cybercrime, disinformation through digital platforms, liability arising from the use of autonomous vehicles, the regulation of cryptocurrencies, electronic contracts and the protection of privacy and personal data on the Internet, just to name a few examples.

The Master in Law of the Digital Society is already in its third edition and aims to offer multidisciplinary training and respond to the demand for professionals with the necessary skills to face the legal challenges posed by the development and widespread use of technologies in today's society.

## COURSES

---
